

I was born and brought up in south-western Nigeria (Ondo State). I had my primary and secondary education in ondo state and my B.Sc degree in Geology at the University of Ilorin, kwara state, Nigeria. In 2009 to 2011, I had my Masters in Geo-information Sciences and Earth Observation at the University of Twente, Netherlands through the Netherlands fellowship Program (NFP). After then, I returned to Nigeria where I gained employment as Assistant Lecturer in the department of Geological science at Osun State University, Osogbo, Nigeria. I am about rounding up my 1st year in my PhD study in the field of Petroleum Geosciences at the University of Manchester. I got married before my Master's degree and my husband as well as my children has been wonderful and very supportive in my career progress. I love reading, meeting people and listening to music. My future plan or vision apart from encouraging the young women to take up challenges in STEM, is to help the less privileged in the society.
